Multiple Trigger Functions

- **Edge Trigger** : Trigger on a rising/falling/either/alternate edge.
- **Pattern Trigger** : Trigger when logic inputs cause the selected function goes true.
- **Trigger Hold Off** : Holdoff time adjustable up to 10s.
- **Runt Trigger** : Use 2 voltage thresholds and pulse width to trigger on either alternate/positive/negative runt signals.

Positive Runt

Negative Runt

- **Pulse Width Trigger**
Pulse width range from 8ns to 50s.

- **Timeout Trigger**
Trigger when no pulse is detected within a specified time, range from 2ns to 50s.

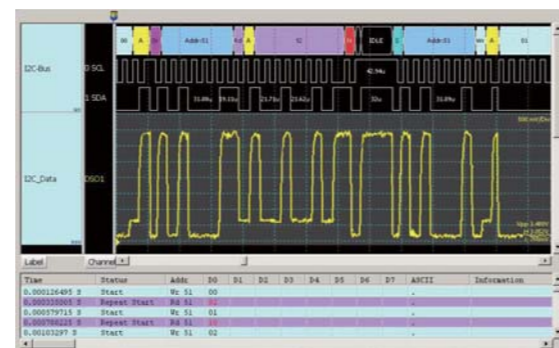

Features

- **Multiple Devices Stack Mode**
Support DSO stack mode, up to 6 devices (12 channels) can be stacked together in the same time.

- **Stack with the Acute Logic Analyzer to form an MSO** :
Use the I²C trigger and the Schmitt trigger functions offered by the TravelLogic, TravelBus and LA3000 Logic Analyzer series to trigger on the target I²C command or data and trigger/synchronize the DSO to also capture the I²C signal to display both the digital and analog waveforms on the same time phase. This shall help engineers to see the design problems more clearly.

Spectrum Analysis

- **Spectrum analysis (Fast Fourier transform, FFT)**
Apply FFT to the selected channel.

Other Functions

- **Vertical Offset**
Right-press the mouse to offset the voltage vertically with the resolution from 2mV/Div to 10V/Div for both channels. The 16-bits resolution TS2212H DSO provides more noise details for this vertical offset function.

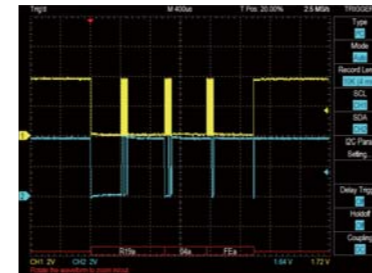

- **64M Sample Points Record Length**
Record length is adjustable up to 64M sample points for 2 channels or 128M sample points for 1 channel.

- **Trigger Coupling Mode**
Provide DC Coupling, Low Frequency (LF) Reject, High Frequency (HF) Reject and Noise Reject function:
LF Reject: Apply 50 kHz high pass filter to the signal before entering the Trigger circuit.
HF Reject: Apply 50 kHz low pass filter to the signal before entering the Trigger circuit.
Noise Reject: Lower the Trigger sensitivity to avoid false triggering.

- **Protocol Decode And Trigger Function**
Provides ARINC 429, CAN/CAN-FD, I²C, LIN, MIL-STD-1553, ProfiBus, SPI (2-Wire), UART, USB1.1,... protocol decode and trigger function, which is able to trigger and decode on the specified Command/Address/Data..

Decode the I²C waveforms

Decode the differential CAN signals with a differential probe.
(CH1: Differential Probe, CH2: CAN H, CH3: CAN L)
※ Supports CAN-FD, CAN2.0

- **Digital Voltmeter (DVM) and Frequency Counter**
Provides voltage root-mean-square, voltage average and frequency counter function for the selected channel.

Measure 1 KHz, 2.5 Vpp square waveforms by the measurement function.

Measure 1 KHz, 2.5 Vpp square waveforms by the DVM function.
